

## Foko Mobile Developer Test

Welcome, applicant!

The following instructions are intentionally very vague. We aim to learn not only about your skill-set as a programmer, but also your knowledge and experience as a general-purpose developer. Furthermore, this developer test is also designed to gauge your problem solving and communication skills.

**Please note:** none of the code provided in this test will be used in any of our modules. The code you write here is simply to evaluate you.

### Requirements

- Using the nhl api specs here <https://github.com/erunion/sport-api-specifications/tree/master/nhl>, design an app, with a menu/drawer on the left listing all the team names with logos.
- When you click/tap a team, the main section lists a feed of players listing jersey #, name, and position.
- Add sorting capability on both the player name and jersey #
- Add filter capability on the position
- Upon clicking a player, load a page/modal displaying the country name and flag of the nationality of the player

### Deliverables

- Feel free to utilize any package dependencies and component libraries of your liking.
- Please provide a link to your hosted source code (github, bitbucket, etc)
